

Is Your Enterprise Secure?

Step 1. Evaluate your Infrastructure

- Workload Specialized Landing Zones
- Cloud Connectors (Interconnects)
- Logging
- Network Segmentation
- PKI Infrastructure
- Key Management Systems
- Identity Infrastructure
- Virtual Private Networks
- Virtual WAN

Step 2. Evaluate your Firewalls

- Traffic Management
- Internal Firewalls
- Perimeter Firewalls
- Web Application Firewalls

Step 3. Evaluate Access Controls

- Compliance Adherence
- Access Management
- EndPoint Management
- Authentication (MFA)
- DDoS Prevention
- Intrusion Detection Systems
- Single Sign On
- Zero-Trust

Step 4. Implement Security

- SIEM or SOAR
- Email & Docs Security
- Security Automation Playbooks
- Endpoint Encryption
- Data Encryption
- Malware Prevention
- Monitoring
- Scanning
- Security Analytics
- Security Auditing
- URL Protection
- Web/App Security

Step 5. Identify Threats

- Advanced Persistent Threat Management
- Automated Incident Detection & Response
- Automated Incident Event Management
- Intrusion Detection Systems
- Malware Detection & Remediation
- Penetration Testing
- Scanning
- Security Operations Center
- Security Threat Intelligence
- Vulnerability Management

Step 6. Review Security Compliance

- Certificates Management
- Data Loss Prevention
- Risk & Compliance Automation
- Data Exfiltration

Step 7. Security Controls

- Customer Cyber Security Policies
- Security Assessment Reviews
- Vulnerability and Incident Management
